

Davone

## Davone Solo

Though displayed here in a mid century, setting, the Solo is the first loudspeaker that has been fully developed in our new 60 square meter acoustically treated listening space. Systematic investigations in this controlled environment have led to the next generation of Davone sound. With the drivers being best in class in their own right, through detailed amplitude and phase adjustments, combined with an optimized cabinet configuration, the individual drivers deliver more than just the sum of their parts.

### Clever cabinet

Just like the acoustic design, the Solo also represents the next generation in cabinet construction. Enhanced computer aided design capabilities have made it possible to create a unique design that takes wood bending to the next level. Through bending and twisting, the side panels become stiffer and more irregular. Both enhancements improve the acoustic properties, leading to a cleaner sound. Furthermore, the clean lines and smooth curves are not merely for the eye. Tall floorstanders suffer from internal standing waves around 150Hz. The Solo interior and exterior construction eliminates these, ultimately leading to a cleaner and faster bass response.

**a**

*29 mm, low distortion ring radiator, with non-reflective cast aluminium chamber, saturation controlled motor system, dual copper caps*

**b**

*4", low distortion driver with balanced drive motor, paper/glass fiber mix cone, operating from 200-2000 Hz*

**c**

*8", Soft, low damping rubber surround, geometrically reinforced aluminium cone, rigid die cast aluminium chassis with extensive venting*
